# EXCLUSIVE ENTRANCE DOORS

Aluminium entrance doors  
with double-sided  
leaf infill  
with a  $U_b$ -value of up to

**0.7**  
W/m<sup>2</sup>K.

Designed with a sense  
of safety,  
aesthetics and comfort.

Aluminium entrance doors for the most demanding. Designed for you.

# INOTHERM

# Welcome to the World of **EXCLUSIV DOORS**

**EXCLUSIV** entrance doors assume a distinctive role in the shape and function for the design of residential and office buildings.

The **EXCLUSIV** entrance door characterizes your house - it lends a unique and characteristic flair to the entrance of your house. You can express your unique taste of style with this door. Confidently stylish - high-class - an impressive symbol of your philosophy of life.

**EXCLUSIV** entrance doors provide various options for meeting the most diverse shapes and functions. The most demanding and sophisticated requirements can also be met.

All materials used in an **EXCLUSIV** entrance door are manufactured in accordance with the most modern production methods. Continuous and constant in-house and external inspections and tests ensure consistently high quality in the fabrication and create an end product of the best quality.

The appearance of your house can acquire a particularly aesthetic appeal by installing an **EXCLUSIV** entrance door and your home can also become safer as a result. We are confident that we shall be able to accommodate several of your requirements and meet your specific needs.

**EXCLUSIV** entrance doors have the following benefits:

- Comprehensive range of products
- Implementation of your own needs and expectations
- Very high values of thermal and sound insulation
- High level of security against burglary
- Long service life of the doors
- Barely and cost or effort required for maintenance and care
- Large choice of models and a holistic range of products on offer

Aluminium and environment in building windows and facades. The valuable material recycling system A/U/F system exists in the construction sector. Residues of cut aluminum from companies and old components dismantled are fed to the recycling system.

### ENVIRONMENT

Aluminium is a lightweight, strong and rustproof material, simple to care for and has an exceptionally long lifespan.

It enables precise treatment, which is very important in the manufacture of products that need to be very airtight and achieve a high level of acoustic and thermal insulation.

Aluminium is produced from natural ore – bauxite, which is available in practically unlimited quantities.

The energy necessary for aluminium production is mostly obtained in hydroelectric power plants all over the world.

Used aluminium products are recycled – or the aluminium is recycled by which the reused aluminium retains its original characteristics.

The recycling process of (used) aluminium only requires about 5% energy of the basic production procedure.

In Europe, about 35% aluminium products are made from recycled aluminium, with this share on the increase.

## EXCLUSIV DOORS THE ADVANTAGES LIE IN THE DETAILS.

The entrance doors of the

### EXCLUSIV RANGE

all have features and are equipped with a high quality three-point latch lock and an end-to-end shooting adjustable bolting bar made of solid stainless steel.

If the user wishes to additionally increase anti-burglary protection, he or she can select from among the additional options listed in the range of fittings and hardware.

### SOFTLOCK CATCH

Benefits at a glance:

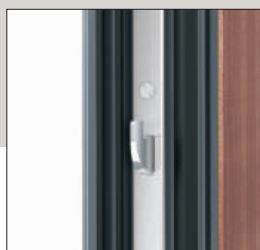

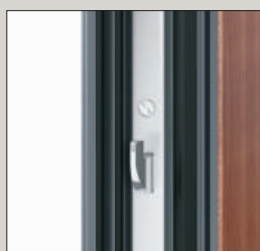

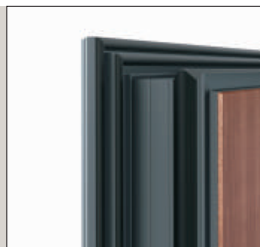

- Quiet closing sound
- Easier catch retraction
- No grease in the catch
- No need for special AT-pieces with plastic inserts

### BOLTING BAR

The stainless steel bolting bars provide increased security and the adjustable feature of +/- 2 mm ensures higher bolting comfort.

The bolting bar is installed as a standard component in all lock combinations.

Doors with double-sided leaf-enclosing infills  
85mm thick

### 3 CIRCUMFERENTIAL SEALS

in the door frame and leaves and  
vulcanised corner fittings

### 3 ADJUSTABLE 3-PIECE

barrel hinges

### 3 - WAY HOOK LOCK,

# TECHNICAL INFORMATION

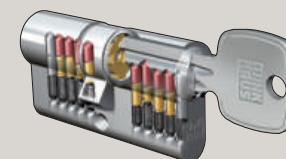

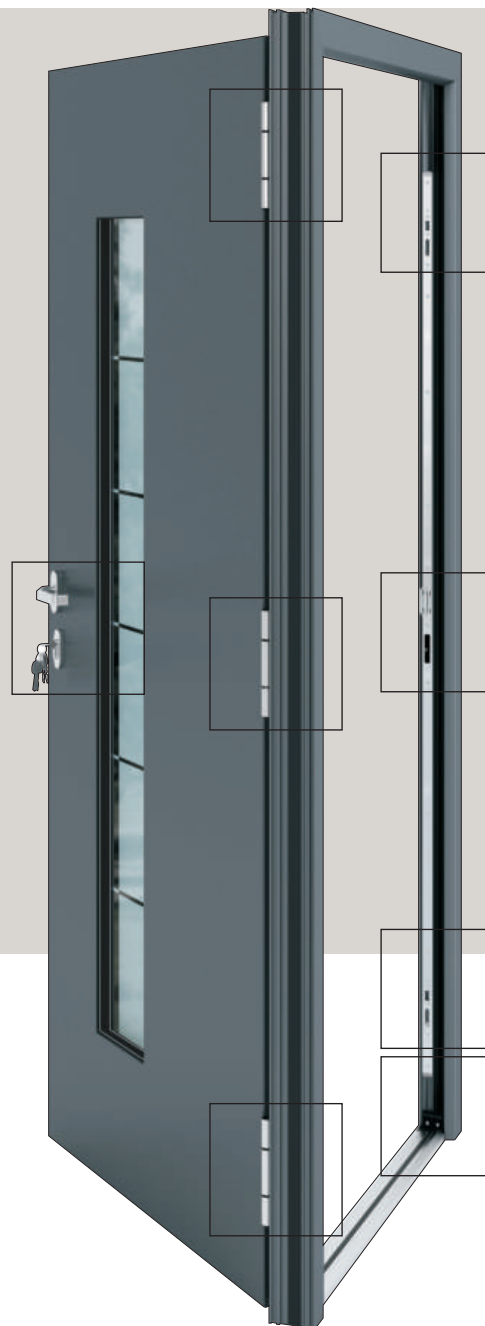

## STANDARD DOOR HANDLE

and rosette inside

GA 11 - Aluminium white  
GA 12 - Aluminium black  
GA 13 - Aluminium EV1

## THREE 3-PIECE BARREL HINGES

As a standard feature, all entrance doors are equipped with three more powerful and adjustable 3-piece barrel hinges. The hinges are available in white, black or EV1 anodized versions.

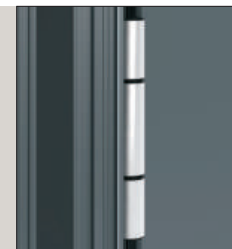

## STANDARD PROFILE CYLINDER

K 20  
Double-sided security function with 6 keys.

## STANDARD LOCK

BT 3 is always installed with the end-to-end shooting bar made of stainless steel. This provides enhanced security. The adjustment of the bolting parts by  $\pm 2$  mm ensures greater locking comfort.

The impact of climatic conditions on the aluminum entrance doors in winter and in the hot summer, the so-called

### BIMETALLIC EFFECT

has triggered an unpleasant leaf deformation, thus leading to difficulties in closing the door.

With the patented leaf design, the

### DILATION LAYER

and an increased thermal bridge with a special U-value lock, ensures that the Exclusiv range has robust construction, an optimal sealing function between the leaf and door frame, and thus, the entrance doors can be used optimally even under extreme climatic conditions.

# DOOR SIZE

Modern construction is increasingly requiring doors of extraordinary dimensions, with structural stability of the products being of great importance.

The exclusive range of entrance doors with unique technical solutions ensures smooth functionality even with a height of 2251 mm up to 2700 mm and a width of up to 1260 mm.

For these dimensions, the

## XL FORM

also includes an installed equipment package (for a surcharge) with a fourth hinge and an extended locking mechanism with a four-pin design and reinforced stainless steel profile. Even the vision panel can be adapted against a surcharge.

## EXCLUSIV DOORS TYPE OVERVIEW

All models of the

### EXCLUSIVE RANGE

can be produced in different designs with side panels and skylights and the corresponding type of opening of the Din direction (Left - Right).

In one piece, the designs according to the

### TYPE OVERVIEW

in the table are possible, and the maximum dimensions are: 2500 mm x 2700 mm.

For larger dimensions, operation of the element coupling is possible, and in doing so, two or more elements can be coupled with one another, with the coupling material (clips/seal) being included (on payment of a surcharge).

**BT 602**  
2 relays  
**CODETASTER**  
100 user codes  
with 4 to 16-digit number

Genius System is the special lock for automatic door locking and unlocking. It has integrated control electronics and an electronically controlled gear motor.

If you prefer the classic version, then you can choose for the

**inokey**  
CODETASTER

The keypad is easy to use, has a modern design and uses advanced technology. The buttons are capacitive and get activated as soon as they come into contact with the finger tips.

The advantage of this keypad compared to classical keypads is the fact that they do not get worn out even after longer periods of use.

This is very important even when it comes to security and safety.

Most people use 4-digit codes and in the classical keypads, these 4 keys get worn out quickly.

Thus, it is no difficult task for the burglar to determine the correct combination.

Both with the keypad and with the fingerprint reader, 2 relays can be triggered, but the relay that it trips is specified for each code.

### BT 19 E

Electronic door viewer  
Interior unit

### FUNCTION:

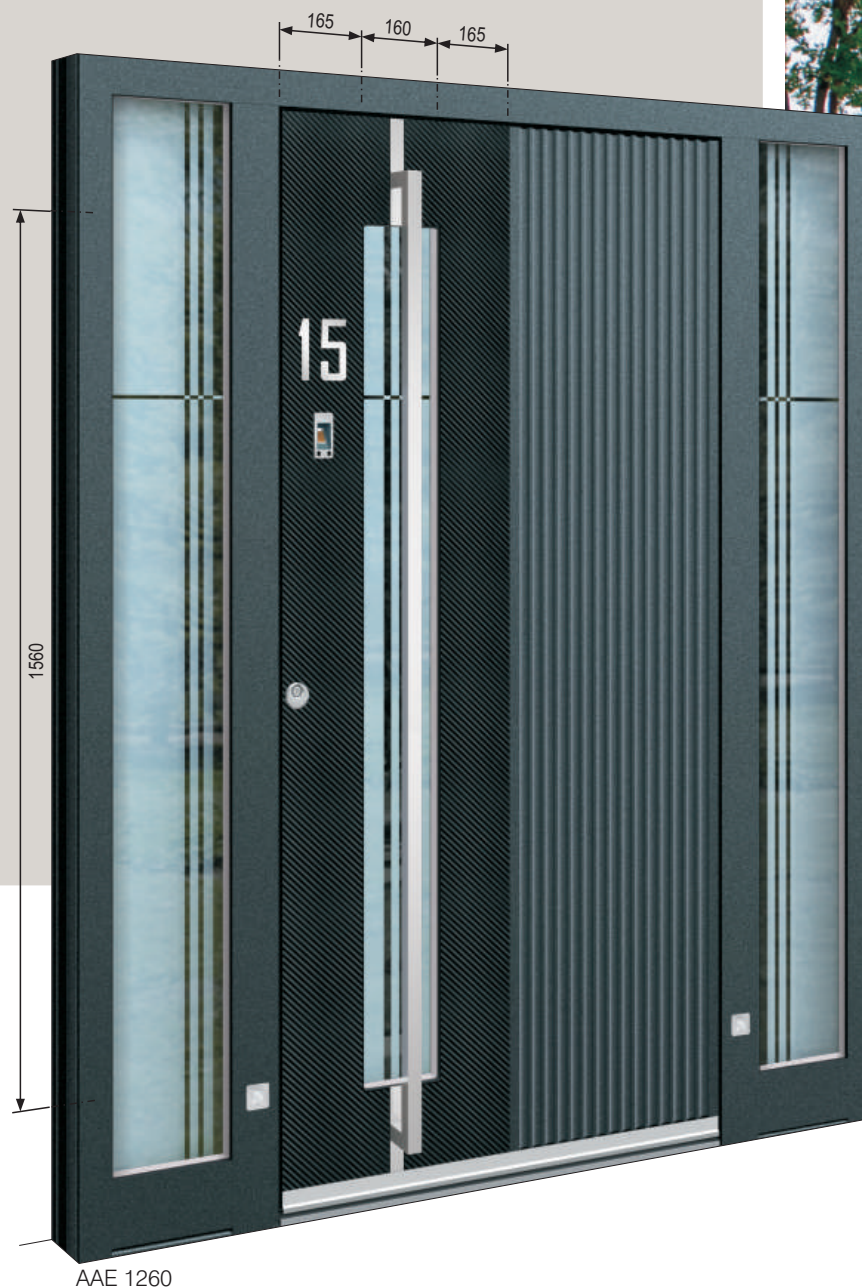

Equipped with a camera and an LCD color monitor, the "electronic door viewer peephole" shows you who is at the door by pressing a button.

### BENEFITS:

- More security for the residents
- Nobody can detect from outside whether there is someone at the door viewer
- Clear images on the screen
- Night vision improvement with the highly sensitive camera
- Simultaneous observation of the monitor screen is possible by more than one person
- Easy operation for children and senior citizens

### OPERATING INSTRUCTIONS:

The door viewer is switched on for about 10 seconds after pressing a button.  
The batteries need to be replaced if the warning lamp lights up.

### Glass motif - MSS (Parsol or Satinato glass)

When ordering the glass motifs we recommend that you choose parsol glass as the base glass: Parsol glass pieces give the MSS motifs an expressive and accentuated appearance. As far as the different entrance door colors are concerned, the customer can choose from parsol gray, green or blue.

Parsol glass is shaded glass but transparent. If the customer does not want to have transparent glass, he may order the glass motif MSS on Satinato white, blue or green. (All parsol glass pieces must be manufactured as ESG.)

The entrance doors of the

### EXCLUSIV RANGE

all have features and are equipped with a high quality three-point latch lock and an end-to-end shooting adjustable bolting bar made of solid stainless steel.

If the user wishes to additionally increase anti-burglary protection, he or she can select from among the additional options listed in the range of fittings and hardware.

### Bolting bar

The stainless steel bolting bars provide increased security and the adjustable feature of +/- 2 mm ensures higher bolting comfort. The bolting bar is installed as a standard component in all lock combinations.

BT 64 - stainless steel

Without any risk!

The door edge gap guard TSH. In other words: the door opens without any risk.

- TSH is the additional protection that you can rely on.
- No peephole is necessary.
- No chain is necessary.
- No scratches and no damage to the chain.
- No additional key is necessary, since locking and unlocking is possible via the main lock box.

### Softlock catch

Benefits at a glance:

- Quiet closing sound
- Easier catch retraction
- No grease in the catch
- No need for special AT pieces with plastic inserts

### Electric door opener

## AGU 3 AGU 3 KABA

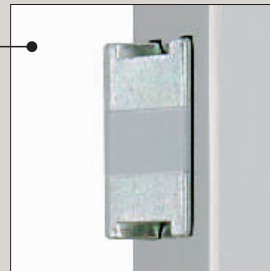

3-bolt latch lock  
with automatic locking  
Stainless steel

### AUTOMATIC LATCHBOLTS

Simply let the door fall into the lock:  
The automatic latchbolts get released 20 mm out after pulling the door shut and are then secured against being pressed back – the door gets locked without locking it. The closure systems can be opened from inside with a handle and from outside by turning a key whenever required.

Benefits of the comfort latch:

- the plastic insert permits the door to be closed softly
- easy operation of the latch
- no grease necessary in the latch
- adjustments of the latch possible via the AT of the bolting bar

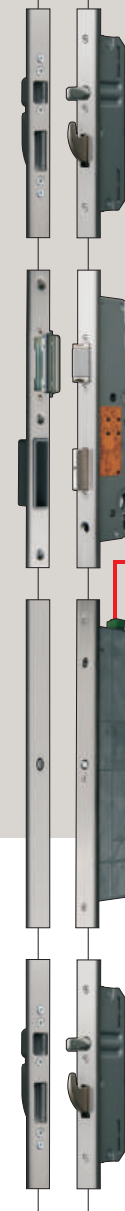

Automatic multiple locking:  
GU-SECURY Automatic –  
the lock with the click

## BT 1020 Comfort BT 1020 Comfort KABA

## GENIUS-SYSTEM

- 5-point locking swing bolt with an electromechanical drive
- end-to-end locking bar made of stainless steel
- FZG (free-running profile cylinder with danger function)
- including 6 keys

As soon as the entrance door is closed, it is locked automatically. The door is unlocked from inside by operating the handle and from outside via its cylinder keys. Moreover, it can be unlocked from inside via the speaker system, button ... possible from outside via the INOTHERM entry modules or another entry control system.

In addition, the quick opening mechanism **GENIUS COMFORT** is installed that enables the Genius to be opened easily with the help of the pusher on the inside of the door.

# ET inokey

SYSTEM

**inokey**  
SYSTEM

2 relays  
**FINGER SCANNER**  
with 1,000 loggings

2 relays  
**CODETASTER**  
100 user codes  
with 4 to 16-digit number

**WIRELESS REMOTE CONTROL**

Opening the doors with the wireless remote control (with 2 pieces supplied by default), in addition with a digital doorbell and a movable interior unit.

## WHAT IS THAT?

**inokey fingerprint reader** is a device with which you can open the door with your fingerprint.

It is an indispensable component of the entrance door of the best quality. It contains the latest technology of this type, and it is the result of the German and Slovenian findings and several years of experience in the field of biometrics.

You will no longer have to look for your key or worry about whether the children have the key and call up the fire brigade in order to enter your own house.

## HOW DOES IT WORK?

**inokey** has an in-built capacitive fingerprint sensor of the latest generation. It is very simple to operate since the finger merely presses on the sensor. That is a great advantage compared to the "pull" sensors with which you have to be careful about how quickly and from which you pull the finger over the sensor. If the finger is identified, the door is opened in 1.2 sec.

The reader identifies even the moist, dirty, greasy and slightly injured finger.

## AND THE SECURITY?

**inokey** does not save any fingerprints, but only the so-called templates which are actually a mathematical code.

The algorithm that generates the template was developed at Siemens and is considered to be one of the best in the world.

It is impossible to get the fingerprint image from this code again.

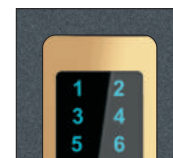

However, everything is still further encoded, which means that misuse is practically impossible. The connection between the reader and the relay unit is protected with a special code that is changed continuously.

Stainless steel  
PVD black

## IS THAT ALL?

**inokey** has 2 relay outputs; the first one opens the door in which it is installed, while the second one opens other doors, for example, opens the garage door or triggers another electrical device.

During registration, the relay that gets triggered is specified for each finger. With the specific finger, even both relays can be triggered simultaneously, which can be used for a silent alarm in case of abduction.

## AND IF I STILL DO NOT TRUST FINGERPRINTS?

If you prefer the classical version, you can choose the **inokey** **codetaster**. The keypad is easy to use, has a modern design and uses advanced technology.

The buttons are capacitive and get activated as soon as they come into contact with the finger tips. The advantage of this keypad compared to classical keypads is the fact that they do not get worn out even after longer periods of use. This is very important even when it comes to security and safety. Most people use 4-digit codes and in the classical keypads, these 4 keys get worn out quickly.

Thus, it is no difficult task for the burglar to determine the correct combination. Both with the keypad and with the fingerprint reader, 2 relays can be triggered, but the relay that it trips is specified for each code.

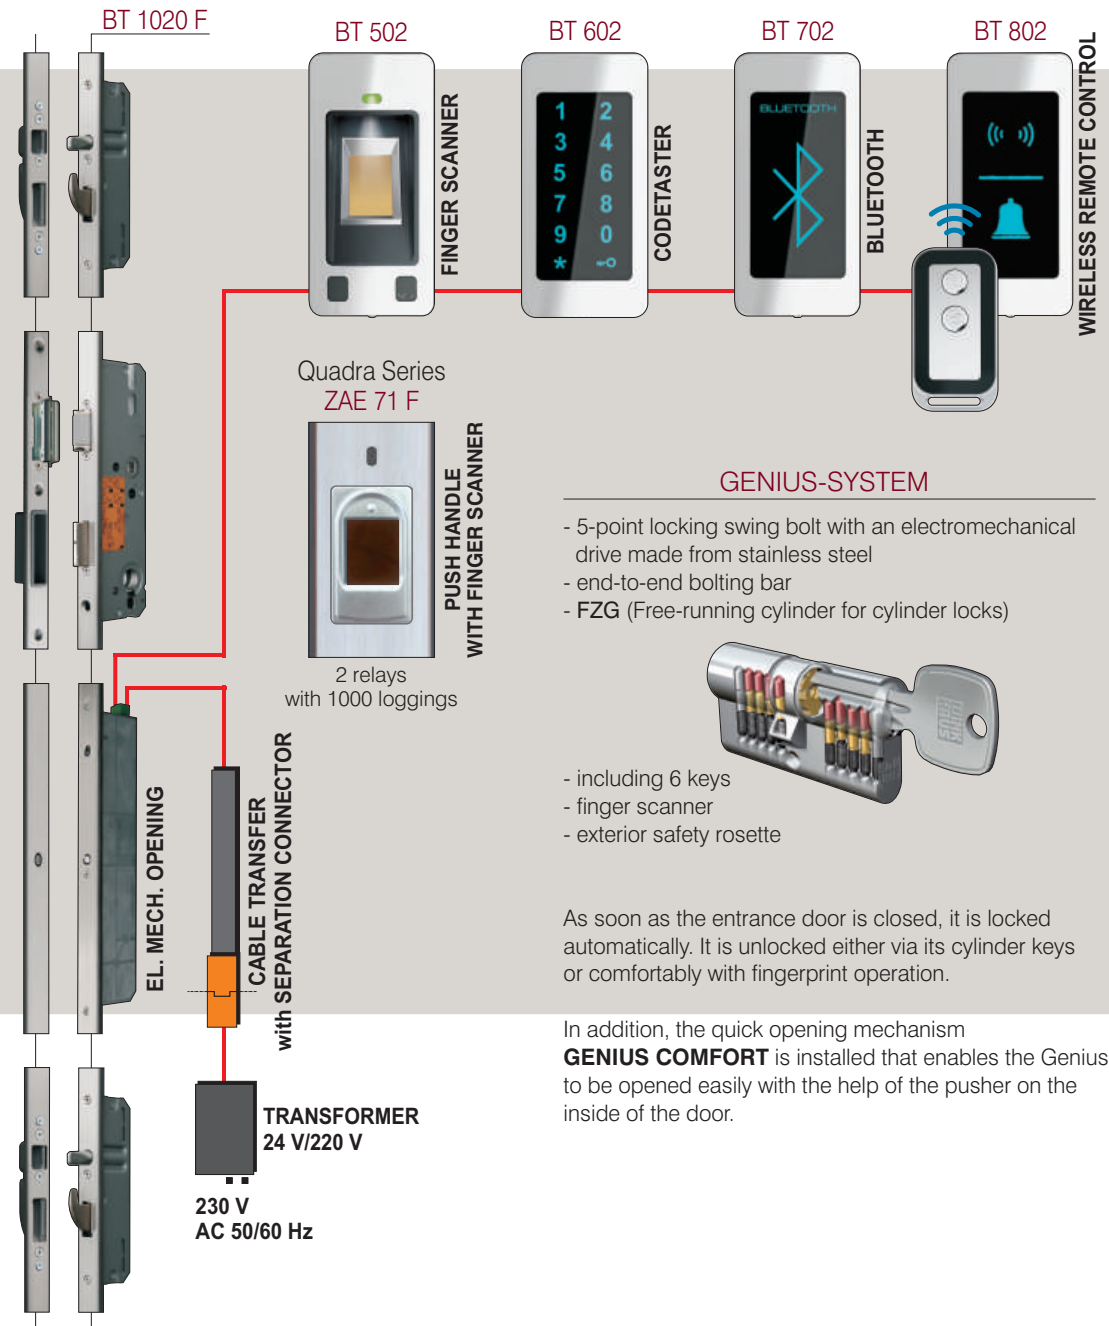

## WOULD YOU LIKE TO DO MORE THAN MERELY OPEN THE DOOR?

**inokey** **wireless remote control** is a device, that combines the receiver for opening the door with the remote control and doorbell button. Like all other **inokey** devices, even this has 2 relay outputs.

You can use the **inokey wireless remote control** to operate up to 7 remote controls and with the wireless doorbell button the wireless doorbell is triggered inside the house.

**WOULD YOU LIKE YOUR CELLPHONE TO BE MORE USEFUL THAN WHAT IT IS?**

We are offering Inokey to you. In accordance with the usual methods, which is applicable to the majority of **Bluetooth** devices, first connect your cellphone to the **inokey Bluetooth**. Whenever you approach the door with the cellphone, you can open the door by clicking on the button for unlocking the door. The only condition is that the cellphone and its Bluetooth must be switched on. Every **inokey Bluetooth** has its own unique PIN code with which new cellphones can be added. Like all other **inokey** devices, even the **Bluetooth** has 2 relay outputs. Capacity 100 cellphones.

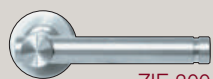

As soon as the entrance door is closed, it is locked automatically. It is unlocked either via its cylinder keys or comfortably with fingerprint operation.

In addition, the quick opening mechanism **GENIUS COMFORT** is installed that enables the Genius to be opened easily with the help of the pusher on the inside of the door.

## FUNCTION:

Equipped with a camera and an LCD color monitor, the "electronic door viewer peephole" shows you who is at the door by pressing a button.

## BENEFITS:

- More security for the residents – nobody can detect from outside whether there is someone at the door viewer
- Clear images on the screen
- Night vision improvement with the highly sensitive camera
- Simultaneous observation of the monitor screen is possible by more than one person
- Easy operation for children and senior citizens

## OPERATING INSTRUCTIONS:

The door viewer is switched on for about 10 seconds after pressing a button. The batteries need to be replaced if the warning lamp lights up.
